

An uncontrollable Rocket

Two years ago, three triplets were at the park, where they found science tickets. Excited, the boys realised that they were from the science lab that shut down eighteen years ago. Jarvis, Caleb and Alex went to the science lab where there was a ROCKET!!! They went in and then heard a countdown. "10 9 8 " at the end, they heard "BLAST OFF!!!" were they are already 100ft in the air and now out of Earth in the rocket, Jarvis found some astronaut suits and they put them on.

After they put on their suits, and were soaring through space, Jarvis, Caleb and Alex were looking out the glass window. They could see three galaxy's. Jarvis was very good at science. He was always talking about going to space because he wants to study Jupiter and its red moon.

Jarvis shouted with excitement, “we are finally in space” he pulled out his notebook and started studying Mars and Jupiter.

Alex had just looked at the galaxy’s, saying “WOAH these are beautiful I love beautiful stuff”. The blackholes are dark as coal.

Meanwhile, Caleb was crying in the corner saying “we going to die” frightened he almost fainted but he didn't.

After what felt like days of countless travel, a giant meteor, dashing through space like a shooting star, suddenly slammed into the rocketship and one the glass windows smashed into a million pieces. The deafening impact sent a shockwave through the ship, causing Jarvis to look for an extra window. He found a book for dummies.

Behind the command panel, they found a drill and screws. they screwed the extra window on the rocket, then all said “perfect”. Caleb wasn't scared anymore, they were going back to Earth

and are never going on a rocket again. When they were fixing the rocket, Alex noticed the rocket had mold and moss on it. It was old, that's why it was uncontrollable. They headed back home, to Earth, going back to their actual homes, away from the science lab.
