

Losing Oxygen!!!

Earlier last month, a group of children were invited to a rocket launch, however they ended up going to space with the astronauts. Sophia couldn't wait to go to space, Jack was terrified, Millie shivered with fear and Max asked way too many questions.

As the countdown began, “10, 9, 8, 7, 6, 5, 4, 3, 2, 1, BLAST OFF!” The crowd started to cheer. Then the huge rocket ship roared off the platform leaving a loud echo. As the smoke filled the air people coughed but that never stopped them from cheering. “I’m terrified what if we don't survive!” mumbled Jack while getting louder. Sophia tried to calmly say “No need to panic, it's not dangerous.” However she failed at that, because Jack was already complaining too much and annoying her. She wanted to stay calm but she already had to deal with Max running around everywhere and Jack and Millie and crying 24/7.

After what felt like days, suddenly some nails started falling out of the walls. Jack shouted and cried in the corner “I’m too young to die!”

“We're only going to the moon!”shouted Max.

Sophie thought he was being only a little dramatic until... Jack shouted “ Tell my mother I love her and my Aunt Mary oh and Uncle Joe also don't forget about my sister Mia!”

They picked up a box that said on it “screwdriver for dummies” Will this be useful for the mission?

As they saw a couple of green human shaped Aliens they got distracted by them a little bit. Suddenly, Jack automatically pressed the big red emergency button. The NASA team started talking ,which startled the others,“Hello, how can I assist you.” “We need help, save us nails falling out of the walls!” cried Jack “No need to panic, have you found the toolbox?” said NASA calmly “Yes I will start using the screwdriver,” said Jack, finally calming down.

Only Jack, Millie and Sophie helped ,who was now excited about the mission,while Max ran around everywhere and started saying things like “When are we going to the Moon.” Soon they finished fixing the walls however now they were determined to reach the moon and back safely.
